Summary

Full Stack Developer with 2 years of professional and co-op experience building multi-tenant CRM, event, membership, communications, and AI workflows. Owns features from requirements through interfaces, APIs, data models, tests, and production rollout, with a focus on secure, reliable systems and human-reviewed automation.

Education

BSc Computer Science, Specialization in Software Systems

Aug 2026

University of Victoria

Runner-up, 2025 Engineering & Computer Science Co-op Student of the Year

Technical Skills

Languages: TypeScript, JavaScript, Python, SQL, Bash, HTML/CSS

Frontend: React, Next.js, Redux, Responsive Interfaces, Real-Time and Optimistic Updates

Backend & APIs: Node.js, Express.js, FastAPI, REST APIs, Webhooks, BullMQ, Redis, SSE, Stripe, Nylas

Data & AI: MongoDB, PostgreSQL, pgvector, Multi-Tenant Data Modelling, RAG, LLM & MCP Integrations

Cloud & DevOps: AWS (Elastic Beanstalk, EC2, S3), Docker, Git, CI/CD, Jenkins, Postman

Practices: System Design, Automated Testing, Security, JSON Schema Validation, PII Redaction, Root-Cause Analysis

Professional Experience

Meaningful — Full Stack Developer

May 2026 – Present | Vancouver, BC (Remote)

- Delivered workflows across **6 product areas**, including CRM, memberships, events, communications, sites, and Action Hub, using React/Next.js, Node.js/Express, MongoDB, and Redis/BullMQ.
- Improved meeting reliability across **4 platforms** (Google Calendar, Meet, Teams, Zoom) through Nylas two-way sync, duplicate-bot prevention, webhook retries, and AWS S3 storage.
- Enabled human-reviewed automation for **3 outcome types** (CRM actions, documents, handoffs) by building a **Claude-powered inbox agent** with Express, BullMQ, SSE, and approval gates.
- Expanded checkout with **10+ event capabilities**, including attendee forms, QR check-in, waitlists, discounts, refunds, multiple currencies, and offline payments, using React, Node.js, MongoDB, and Stripe.
- Eliminated full-client transfers of **10K+ CRM records** by introducing server-side MongoDB pagination, indexed filters, and cached result counts for React/Next.js views.
- Eliminated cross-tenant data exposure by enforcing **document-level tenant scoping** across MongoDB queries, ownership checks, transactions, and webhook validation.

Meaningful — Full Stack Developer Co-op

Jan 2026 – Apr 2026 | Vancouver, BC (Remote)

- Exposed **160+ platform operations** to AI workflows by building **5 type-safe MCP servers** with TypeScript, Node.js, MongoDB, API-key controls, and 100+ test scenarios.
- Expanded **5 revenue and member modules**, including events, memberships, sponsorships, auctions, and scheduling, through React/Next.js interfaces backed by Node.js, MongoDB, Stripe, and job queues.

Inspire, University of Victoria — Software Engineer Co-op

Sep 2025 – Dec 2025 | Victoria, BC

- Onboarded **3 nonprofit organizations** by building an AI meeting platform with Next.js, Express, OpenAI, Redis, BullMQ, and AWS Elastic Beanstalk.
- Improved briefings and follow-up drafts for **20+ study participants** by combining CRM history, email activity, and user feedback with **multi-stage LLM safeguards**, including deterministic JSON schema validation, PII redaction, and hallucination checks.

Projects

ReleasePilot — Full-Stack Release Readiness Platform / Next.js, FastAPI, PostgreSQL

Sep 2026 | Victoria, BC

- Engineered a full-stack release-readiness platform using **Next.js**, **FastAPI**, and **PostgreSQL/pgvector** to evaluate PRs, commit diffs, CI runs, and runbooks into interactive, cited risk reports.
- Developed a **3-agent MCP pipeline** with typed Pydantic handoffs, hybrid vector search, **idempotent background jobs**, signed GitHub webhooks, Redis caching, and **deterministic policy guardrails**.

Cross-Meeting Insights — 1st Place, Inspire Hackathon

Oct 2025 | Victoria, BC

- Won **1st place** by connecting CRM history to live Nylas transcripts and using OpenAI to prioritize follow-up actions in a real-time Node.js service.
